

## Document protection

### Complete solutions

Ever since it was founded Cappelen Bulgaria has specialized in the area of security paper and documents. Thanks to its experience and expert knowledge gained over the years, the company is able to offer its clients professionally prepared and individually tailored complete solutions, carrying out a variety of high security document production.

The company began with the delivery of passport paper and security paper for the first revenue stamps. Over the years Cappelen Bulgaria has developed a complete concept for the design and production of ID documents and the compatibility of different security elements. The company offers security materials and technologies from world-renowned leading manufacturers in USA, Germany, Switzerland, United Kingdom, the Netherlands etc.

Cappelen Bulgaria has raised Bulgarian ID documents to a world-class level – a result partially due to the Bulgarian contribution in technical and functional aspects. Together with its partners, Cappelen Bulgaria has made a crucial contribution to the composition of the visas, issued today within European Union and Schengen Area. Thanks to the high security level of the documents, Bulgarian citizens acquired the right to travel without a visa some years before Bulgaria's accession to the European Union.

Cappelen Bulgaria has always aimed at creating innovative solutions, using state-of-the-art technologies.

### Materials for security documents manufacture

In addition to complete innovative solutions in the area of security documents, Cappelen Bulgaria is also a security materials provider. Together with its partners, as well as proven specialists and experts from Western European countries, Cappelen Bulgaria offers its clients the latest developments in the area of security materials and technologies – a result of the research and development activities of specialist agencies, laboratories and world leading manufacturers.

Cappelen Bulgaria was among the first providers to offer security paper with chemical protection – 4-tals (four-way chemical protection). At the recommendation of Cappelen, the product IRISAFE applied in the protection of transport tickets, cheque-books and other securities was launched in Bulgaria. The security TKO foil, applied for the first time in the Bulgarian passport, has become an indispensable part of the protection of ID documents in almost all countries around the world.
